Tanya,

The change can be documented in the field log book and hopefully there is locational data associated with it.

Bill

Hi Bill,

I left you a voice mail regarding the following change to FCR-02. Please let me know how you would like ARCADIS to add the following change, to the field log book or make a revision to the FCR-02. Either is fine with me.

Thanks,

Tanya

Suzy,

The relocation of samples SS-137 and SS-138 due to debris is approved. These samples may be analyzed per the SAP.

I will get back to you on how to document this change.

Regards,

Tanya

Subject: Soil Sample Relocation
Importance: High

Tanya,

On Friday (January 2, 2015) at one of the last soil locations (SS-137), the field crew observed glass on the ground surface at the proposed location. The crew moved 10 feet until they did not observe any trash and then collected SS-137 and SS-138, 25 feet and 50 feet from this point. We sent these samples to the laboratory but have placed them on hold until we have your approval for analysis. If you would prefer for us to revise FCN-02 with this information, we can do that and resubmit today. After we have your approval, we can go out to those locations and recollect the samples. Given that the schedule has already been delayed and recollecting these samples would increase that delay, we would prefer not to repeat the sampling. However, we will do so if necessary. Please let me know how you would like us to proceed.

Thanks,

Suzy
